

Phaidra repository

Open Source project at the University of Vienna

A brief history of the repository

- 2007: The university needs a place to store their assets
- 2008: First release of Phaidra
- 2010: Partnership with the University of Padova
- 2010/2011: Hosting for other universities in Austria
- 2012: New architectural design
- 2014: Focus shifted to RDM
- 2018: Promoting Phaidra as Open Source project
- 2020: First Phaidra Con

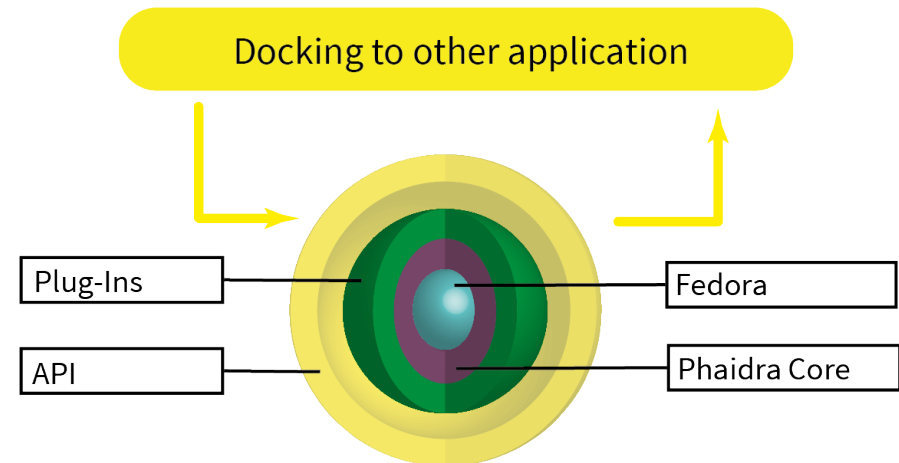

Why Open Source

- We are promoting open, so we should be open as well
- We can't, but we can be transparent
- We need to deal with the limitation of an university

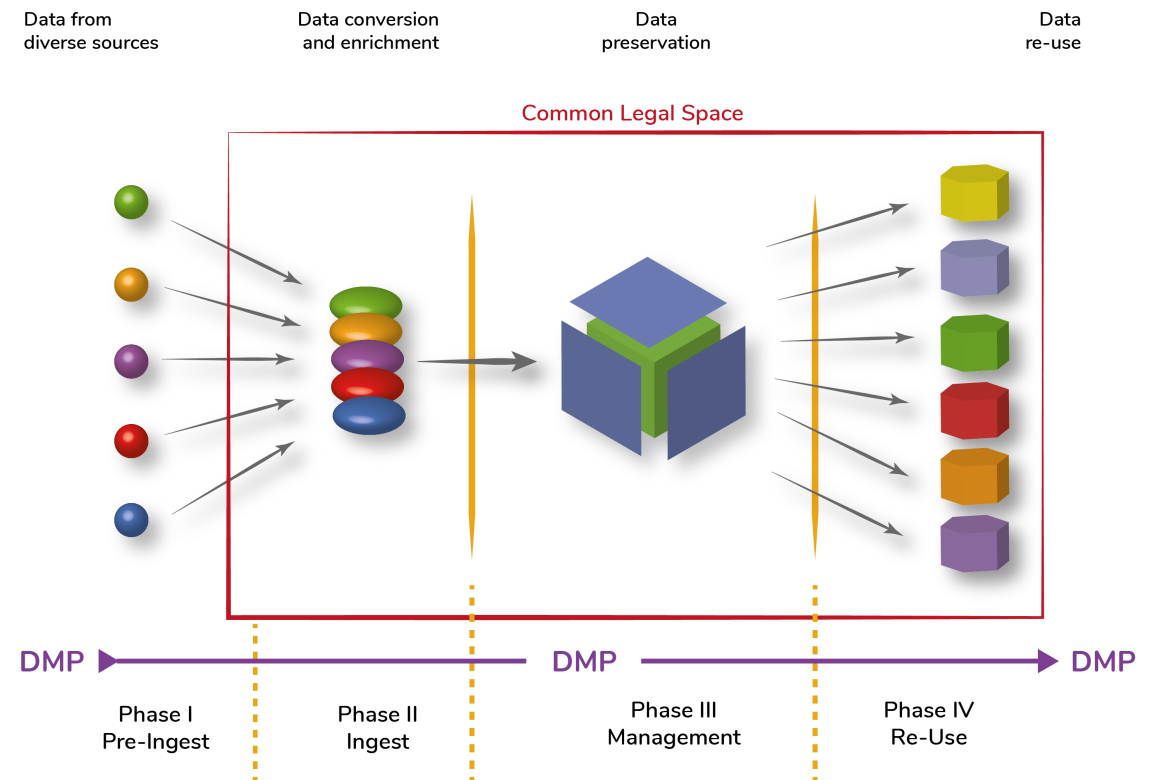

How we do it

- Building networks and be active in different networks
- Building Phaidra easy to integrate with other systems
- Offer not only a repository, also knowledge for RDM

What we do

- Establishing models for RDM
- Enable the partners to develop projects around Phaidra
- Building a community of core developers
- Running community events
- Be part in projects

Strenghts

- We do not only focus on the development of the repository
- We have a sustainable community
- We can profit also from the use cases of our partners

Weaknesses

- We do not only focus on the development of the repository
- We have not a sustainable funding
- We are not known for the repository
