# How would you describe the workshop?

# What is the key thing you learned this week?

That I am not alone with my challenges at all.

I am not even close to alone in my challenges AND my opportunities!

range of approaches to research data management services is broad and ambitous

There are lots of RDM platforms out there. Daunting to be able to pick the right one.

It's nice to reinforce that I'm not the only one struggling with these problems

The diversity of models for RDM service delivery.

better understanding of the broader community as well as benefitting from the daily deep-dives into topics

The most important thing was hearing about new projects / case studies / experiences that I hadn't encountered before. I look forward to following up with some of the new people I met.

finding good partners is the key

26

# What is the key thing you learned this week?

opportunities for addressing shared challenges together

More partnerships are happening than i realised

the procurement process, the procurement process, the procurement process

That our work in RDM services is critical

There's some amazing work going on literally world-wide

Feel like there are opportunities to work together.

That, as always, we have lots to gain by sharing experiences - suppliers & research organisations both

We should keep growing as a community together!

Much better understanding of the ecosystem and some of the players. It was also very helpful to get a better understanding of the history and trajectory of RDM services

26

# What is the key thing you learned this week?

wide range of people involved in procurement; range of perspectives of different people from broad to narrow;

Working together is key for success in RDM

There are alternatives to procurement and others want to use open source too!

Certainly I learned things, and also realize that others have similar situations / challenges.

Clear that RDM needs multiple stakeholders. This is mentioned in the Research Data Culture Conversations.

There are opportunities for us to learn from and work with one another, from the end user to the institution, and provider to provider along the research data lifecycle. We strengthen each other with communication.

Good networking opportunity

LOTS

26

# What would you most like to see as a result?

**11** — Case studies of existing practice

**9** — Guidance on procurement

**13** — Approaches to developing business models

**12** — Investigation of costs between open vs proprietary solutions

**13** — Peer network to exchange ideas and offer support

**13** — RDA IG/WG on delivering RDM services

**5** — All of the above!

**2** — Something else
