

# AARC-I047 - Guidelines for scalable authorisation across multi-SP environments

## Summary

*The purpose of this document is to guide infrastructures in the efficient implementation of the access restrictions that are required by the individual communities and e-Infrastructures. The guidelines are given within the setting of the AARC BPA. In this scenario, user communities make use of an SP-IdP-Proxy (including Attribute management). The users are given access to resources (end services) via infrastructure SP-IdP-Proxies. Guidelines are derived from the more detailed Deliverable DJRA1.2 on authorisation models.*

(Note the overlap with discussion in [JRA1.4B](#))
