

AARC-G032 - Guidelines for registering OIDC Relying Parties in AAls for international research collaboration

Guidelines for registering OIDC Relying Parties in AAls for international research collaboration

Summary

The most prominent protocol that should be supported along with SAML in the R&E sector is OpenID Connect (OIDC). OpenID Connect is becoming a widely accepted standard in both the commercial and the R&E sectors.

Relying Parties, or Clients, registration to the OP (OIDC Provider) is a fundamental part of the OIDC workflow, and most of all Dynamic Client Registration (1). Dynamic Client Registration is a powerful and effective way to enable new relying parties, but it has no attached processes to define the trust between the client and the OP.

OpenID Connect Federation 1.0 Draft 3 (2).
