## About

Atlassian Bamboo is a continuous integration (CI) and continuous deployment (CD) server. For more information please refer to <https://confluence.atlassian.com/bamboo/understanding-the-bamboo-ci-server-289277285.html>

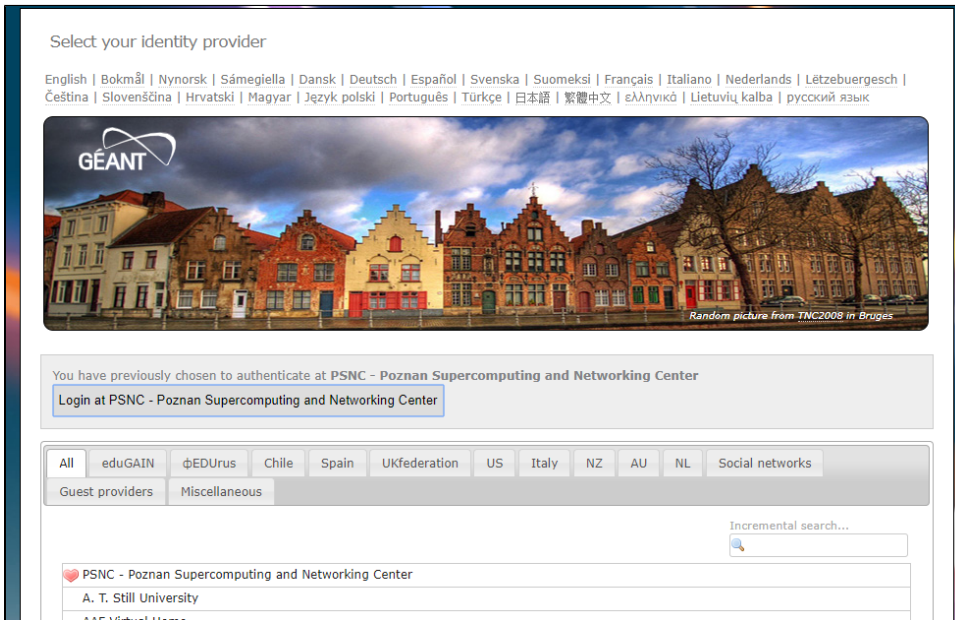

Geant Bamboo instance is available at <https://bamboo.software.geant.org>

## How to access Bamboo

1. Go to [bamboo.software.geant.org](https://bamboo.software.geant.org) and click **Log In** link in right top corner or choose "Geant Federated Auth" option from "Select your Identity Provider" section.

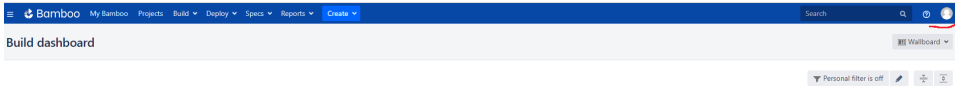

2. You will be redirect to [login.geant.org](https://login.geant.org) where you can choose your Identity Provider and use it to log in.

3. After successful login you will be redirect to Bamboo. If you are logging in for the first time, your account in Bamboo will be created automatically.

## How to check your username

1. Log in to Bamboo as described in [How to access Bamboo](#)
2. Click on the icon in top right corner and choose "Profile". Username is highlighted on screenshot below

## How to create project

Projects are created only by Bamboo administrators. To request new project, please create ticket in [JIRA Software Tools HelpDesk Portal](#) or send an email at [help@software.geant.org](mailto:help@software.geant.org). You must provide following details:

- project name
- project administrator - [username](#) of person who will be responsible for repositories and granting permissions for users

## How to get access to project in Bamboo

Project administrator is responsible for granting permissions to particular projects/repositories. You should contact with administrator of your project and ask and provide your [username](#).
