

# Shibboleth Configuration Example

## How to configure your Shibboleth IdP to send F-TICKS

Easily done in 2 steps:

1) Modify the file "logback.xml" adding this part of code right above "`<!-- F-TICKS syslog destination -->`"

```
<!-- F-TICKS syslog destination. -->
<appender name="IDP_FTICKS_GEANT" class="ch.qos.logback.classic.net.SyslogAppender">
  <syslogHost> IP.ADDRESS.OF.THE.COLLECTOR </syslogHost>
  <port>514</port>
  <facility>AUTH</facility>
  <suffixPattern>[%thread] %logger %msg</suffixPattern>
</appender>

<logger name="Shibboleth-FTICKS" level="ALL" additivity="false">
  <appender-ref ref="IDP_FTICKS_GEANT"/>
</logger>
```

2) Restart the service with the following command:

```
export JAVA_HOME=/usr/lib/jvm/default-java
/bin/sh /opt/shibboleth-idp/bin/reload-service.sh -id shibboleth.LoggingService
```
