

Using SimpleSAMLphp with Lifesize Cloud

WORK IN PROGRESS

Goal: use your SimpleSAMLphp based Identity provider to have Single Sign On with LifeSize Cloud

For this example, we're assuming your IdP is available at <https://test-idp.geant.org/>.

Make sure your IdP works and you have these attributes available:

mail

givenName

sn

Add Lifesize metadata

Download the lifesize metadata from <https://login.lifesizecloud.com/ls/metadata/>, and paste the contents (XML) into the metadata parser page on your SimpleSAMLphp instance. This is located at URL <https://test-idp.geant.org/admin/metadata-converter.php>.

Paste the resulting PHP code into `metadata/saml20-sp-remote.php`

You could add this authproc to make sure you're not releasing too much information to Lifesize:

```
'authproc' => array(
    90 => array(
        'class' => 'core:AttributeLimit',
        'mail',
        'givenName',
        'sn',
    ),
),
```

In the Lifesize management page, fill in these details:
