

# Why I hate Confluence

Granted, there are many nice things about Confluence. But it's not only sunshine and unicorns. Here are a few of my hang-ups - some have been there for 10+ years!

- No checksums available for products: <https://jira.atlassian.com/browse/CONFSERVER-25687>
- No automated way to set-up the product: <https://jira.atlassian.com/browse/CONFSERVER-45381>
- OpenJDK is not supported: <https://jira.atlassian.com/browse/CONFSERVER-16431>. This forces people to use the evil Oracle JRE/JDK: <https://confluence.atlassian.com/doc/supported-platforms-207488198.html>
- It's not possible to rename a space key: <https://jira.atlassian.com/browse/CONFSERVER-2085>
