The MyAccessID Identity and Access Management Service is provided by GEANT with the purpose of offering a common Identity Layer for Infrastructure Service Domains (ISDs).

Initially, MyAccessID will be used for providing authentication services to FENIX, PUHURI and LUMI. The AAI proxy of MyAccessID connects Identity Providers from eduGAIN, specific IdPs which are delivered in context of ISDs such as HPC IdPs, eIDAS eIDs and potentially other IdPs as requested by ISDs.

MyAccessID delivers the Discovery Service used during the user authentication process for users to choose their IdP. It enables the user to register an account in the Account Registry, to link different identities and it guarantees the uniqueness and persistence of the user identifier towards connected ISDs.
