

AARC-G025 - Guidelines for expressing affiliation information across infrastructures

Guidelines for expressing affiliation information across infrastructures

Summary

The goal of this document is to define how affiliation information should be expressed when transported across AARC BPA-compliant AAls. Two different types of affiliation have been identified, namely Affiliation within the Home Organisation, such as a university, research institution or private company; and Affiliation within the Community, such as cross-organisation collaborations. Both affiliation types should be communicated to the service providers that rely on affiliation information in order to control access to resources.
