OpenSSH with LDAP public keys

Ubuntu 12.04 ships with OpenSSH-5.9p1.

We would like to have the LDAP Public Keys patch incorporated, as well as the SFTP File Control patch

To do this:

- cd /usr/src
- apt-get source openssh && cd openssh-5.9p1
- patch < ~/sftp.patch
- dpkg-source --commit
- patch < ~/lpk.patch
- dpkg-source --commit
- dpkg-buildpackage

The LPK patch is derived from Gentoo. The SFTP file control patch is the one for 5.4p1.
Both had to be slightly changed so they could be applied (order: sftp,lpk).

After successful compilation I have added them to our new Ubuntu repository at http://ubuntu.terena.net 🙂
