

# Old SCIV2-WG documents

The Security for Collaborating Infrastructures working group (SCIV2-WG) is a collaborative activity within the Wise Information Security for e-Infrastructures (WISE) trust community. SCIV2-WG members include information security officers from several large-scale distributed Research Infrastructures and e-Infrastructures. The aims of the trust framework defined in this document are to enable interoperability of collaborating Infrastructures and to manage cross-Infrastructure operational security risks. It also aims to build trust between Infrastructures by defining standards for collaboration, especially in cases where specific internal security policy documents cannot be shared.
