

This wiki space is dedicated to project management and internal communications purposes. If you are looking for our public website targeting users and other key stakeholders, please visit: <https://up2university.eu>

The key objective of the project is to bridge the gap between secondary schools and higher education & research by better integrating formal and informal learning scenarios and adapting both the technology and the methodology that students will most likely be facing in universities.

The learning context from the perspective of the secondary school students is the intersection of formal and informal spaces, a dynamic hybrid learning environment where synchronous activities meet in both virtual and real dimensions.

For this, we propose to develop an innovative Up to University (Up2U) ecosystem – based on proven experiences in higher education and big research – that facilitates open, more effective and efficient co-design, co-creation, and use of digital content, tools and services adapted for personalised learning and teaching of high school students preparing for university. We will address project based learning and peer-to-peer learning scenarios.

Up2U Board Members

Antonio Vieira de Castro - ISEP, Eli Shmueli - IUCC, Vicente Goyanes - TELTEK

John Domingue - Open University and Gabriella Paolini - GARR

Main activities & WP leaders

WP1 - Project management and external liaison

Project management
Finance and administration
IPR and external liaison

Peter Szegedi - GÉANT

WP2 - Dissemination and outreach

Project communications
Web presence and design
Event and training organisation

Barbara Toth - KIFU

WP3 - Cloud-based infrastructure services

Network services and access
Federated cloud storage and sharing
OER aggregation and exposure

Ilias Hatzakis - GRNET

WP4 - Integrated application toolbox

Application toolbox framework (LMS)
Tools for formal learning
Tools for informal learning

Allan Third - Open University

WP5 - Learning community management and skills

Subject Matter Committee and training programme
Teacher skills development
Project-based and peer-to-peer learning scenarios
Social innovation, real-time creation and assessment

Stefano Lariccia - University of Rome

WP6 - Roadmap for security and trust

Security roadmap
Trust and identity
Content policy and OER curation

Gabriella Paolini - GARR

WP7 - Pilot coordination and continuous risk assesment

Large-scale pilot coordination
MVP and continuous service improvement
Quality control and risk assessment
Evaluation of results

Micha Zimniewicz - PSNC

WP8 - Sustainability and exploitation of results

Sustainability and business models
Ecosystem analysis
Industry engagement
New schools

Philipp Wieder - GWDG

WP9 - Ethics requirements (RESTRICTED)

Non-EU countries
Humans
Protection of personal data

Peter Szegedi - GÉANT

Objectives

We are focusing on the context of secondary schools, often referred to as high schools, which provide secondary education between the ages of 11 and 19 depending on the country, after primary school and before higher education.

We strongly believe that all the tools and services the project is going to use and/or make available (i.e. incorporate, design, develop and test) must be sustainable after the lifetime of the project. Therefore, the project is going to develop business plans and investigate appropriate business models using the expertise of the Small Medium Enterprise and National Research and Education Network partners and their contacts with third-party business actors.

Our plan is to make it easy for new schools to join the Up2U infrastructure and ecosystem that will form a federated market-place for the learning community.

1. To assess the use of public and private cloud-based infrastructure services with proven track records in higher education and research, integrating and adapting them to the specific learning context of schools.
2. To design and develop a scalable and flexible integrated "application toolbox", which supports student-driven, personalised, dynamic learning path creation with social sharing and interactions (i.e. project-based and peer-to-peer learning and assessment) on top of the aforementioned cloud-based service infrastructure.
3. To build and train the learning community for the specific learning context and to facilitate the development of the critical thinking by students and tutoring role of teachers that are essential in an informal learning environment.
4. To propose an executable roadmap for ensuring security and privacy. Specifically, the project will address filtering of network traffic at schools, handling of intellectual property rights, copyright materials, student identity, and the right to choose data storage locations.
5. To roll out and test the infrastructure service components and the application toolbox through very large-scale pilots in at least 7 European countries (Germany, Greece, Hungary, Italy, Lithuania, Poland and Portugal) to identify strategies for scaling and achieving bigger impacts.
6. To develop, establish and operate a continuous risk assessment function during the entire lifetime of the project and to liaise with other related projects and initiatives.
7. To define an effective sustainability and exploitation framework based on GÉANT's NREN community, their existing customer base, SME partners and connected schools in order to mainstream learning solutions for secondary education that are proven in higher education and research contexts.

18 Partners from 12 Countries across Europe

The innovation action leading to these results has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No. 732049 – Up2U.

Background

"European countries that lack natural population growth due to low birthrates and at the same time are major senders of immigrants to other countries face the severe risk of contraction of higher education institutions, stagnation within the education market as well as the labor market, and thus a decline in economic growth."

Demographic Trends and Risks for European Higher Education

Fatma Mizikaci and Bernd Baumgartl

"About 63% of nine year olds in the EU are in schools that are still not digitally equipped although 90% of jobs will require digital skills by 2020."

The "Opening Up Education" policy of the European Commission

"Age differences, however, are more pronounced for private or mobile Internet use with teenagers aged 15-16 years old far more likely, about 84%, to access the Internet in their own bedroom."

The "Net Children Go Mobile" project study

Methodology
